Value: £ 250,000

Architect Broadway Malyan
Scope Workstations & Accessories, Storage, Bespoke Storage, Meeting Rooms & Loose elements
Brand Techo, Dynamobel, Hay, Vitra, Allermuir, Centrium

Challenge NG Bailey's move to the famous Angel Building was an important one as it will be their flagship office. The space needed to be modern and representative of the company whilst maintaining functionality. The space brought together a number of offices to unite the company under one roof. Lead time was critical with a incredibly tight lead time to ensure that NG Bailey could occupy before their various other leases finished.

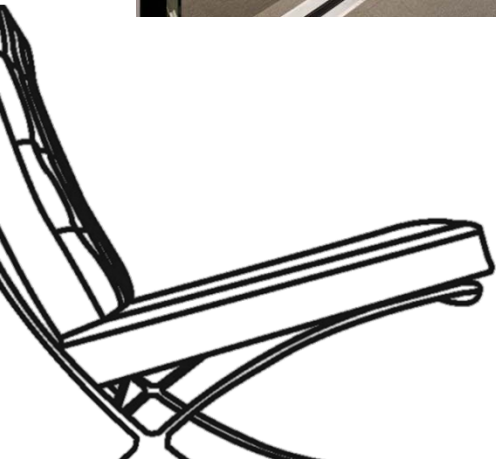

Solution Spacecraft utilised Techo's Platform benching system throughout and designed special executive workstations to match the system and keep the uniform look throughout. Adding flashes of Eames and bold colours in the upholstery the clean white look was brought to life. Bespoke Centrium layout benches provided the critical functionality that the company required.

SPACECRAFT

CASE STUDY

Solution Centrium bespoke storage and storage wall was used throughout the building again injecting personalisation and accommodating the various storage requirements. Loose elements including seating and tables enhanced the different schemes and added further colour and style.

Outcome A modern harmonious scheme with simple and robust furniture to handle a fast paced organisation. The result provided a breathe of fresh air to the employees of NG Bailey where they finally have a central hub to be proud of. As a result of our performance we are now working with the companies facilities managers across the country to phase in the scheme implemented in their London HQ.
